STEP 1

Assemble Left and Right walls to the 1st Floor using 4 Hex Bolts as shown.

Do not tighten the bolts completely at this time.

Note: the edges of the floor should fit into the grooves on the bottom of both walls.

STEP 2

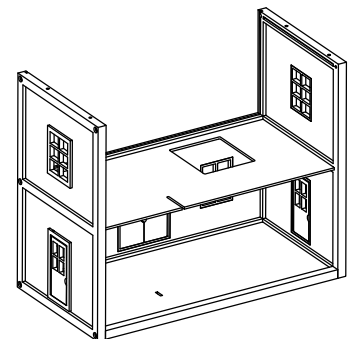

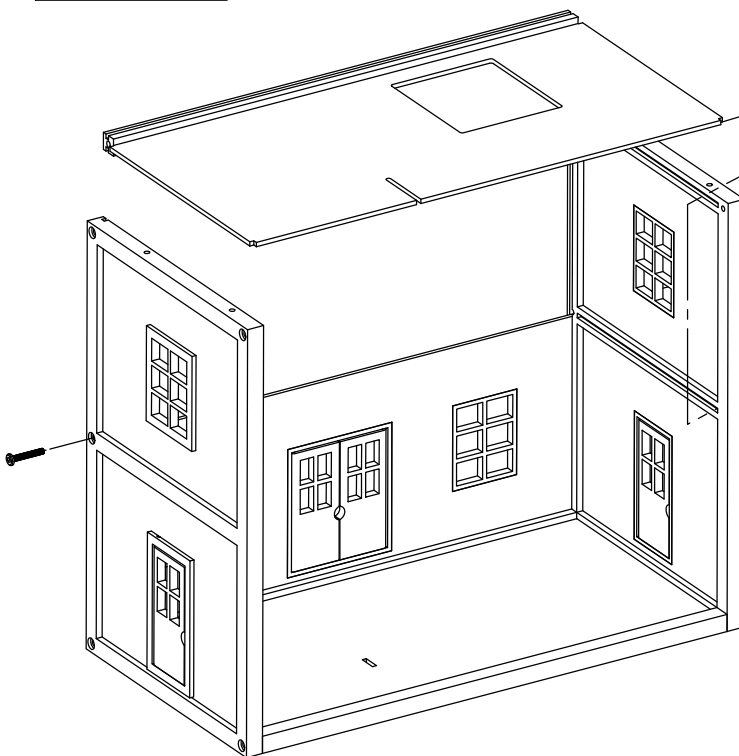

Insert one of the front walls between the side walls as shown, making sure that it fits into the grooves on the left and right side walls, and into the bottom floor.

STEP 3

Now fit the 2nd floor into the grooves in the side walls and onto the top edge of the front wall as shown here.

Insert 2 Hex Bolts as shown, but do not tighten completely yet.

STEP 4

Attach the inner wall panel by sliding it into the slot in the 2nd Floor as shown.

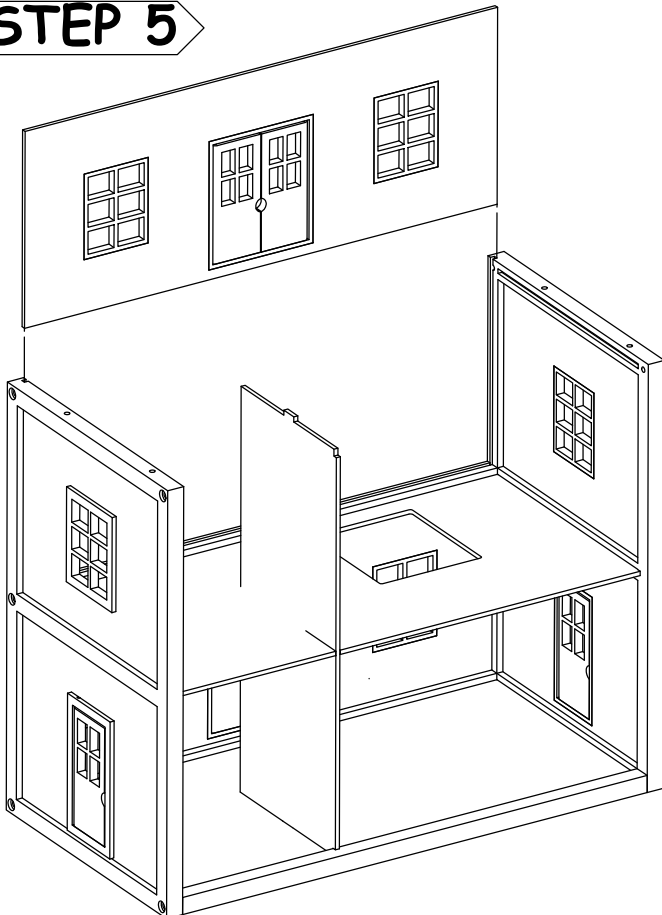

Make sure that the slot in the wall faces the slot in the floor.

Also check that the bottom tab on the wall fits into the slot in the floor.

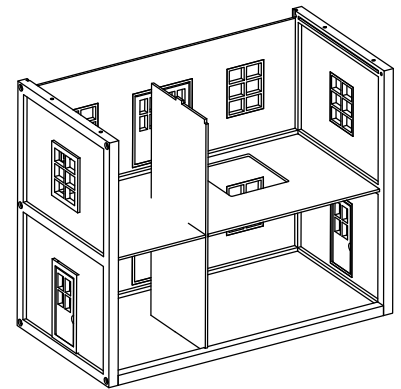

Note: This wall can be installed either right side up or upside down. Either way is ok.

STEP 5

Slide the remaining Front Wall into the grooves of the left and right walls as shown making sure that the wall also fits into the groove at the front of the 2nd floor.

STEP 6

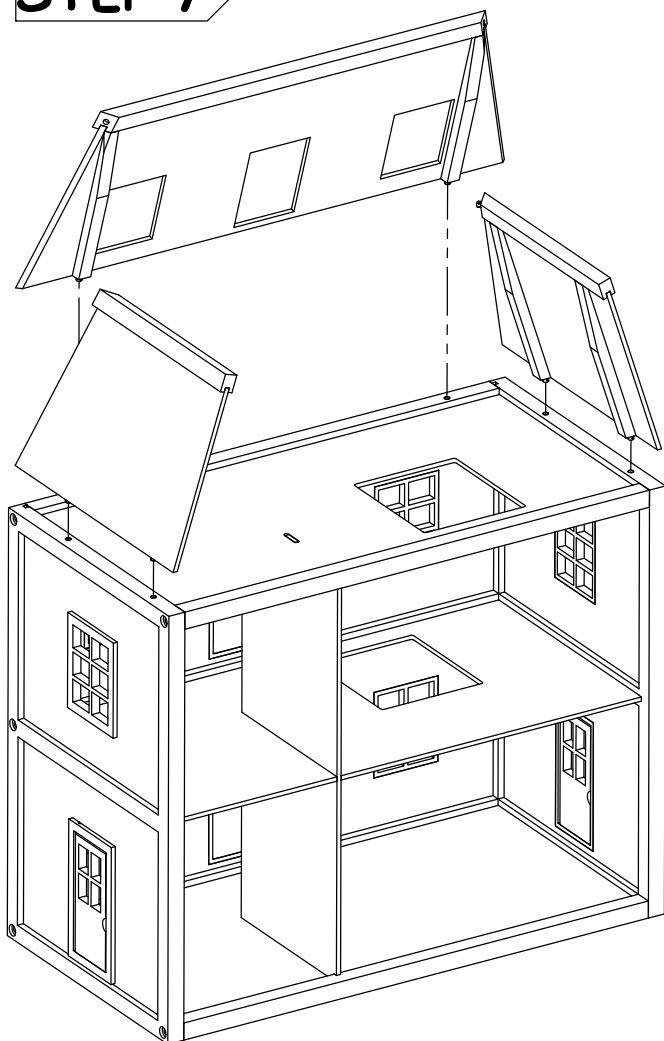

Fit the 3rd Floor as shown inserting the ends into the grooves of the side walls.

Using 4 Hex Bolts, secure the 3rd floor and tighten.

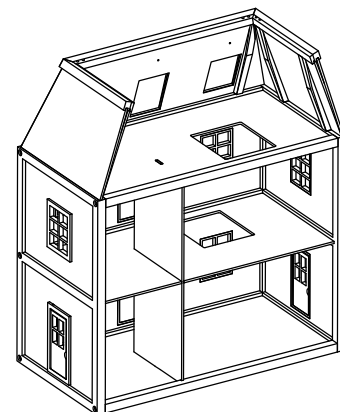

You can now go back to all 10 of the Hex Bolts and finish tightening completely.

STEP 7

Attach the Left, Right and Center Roof panels as shown by pushing the pegs on the bottom of the parts into the holes on top of the house.

STEP 8

Press in 2 Roof Connectors at the top corners of the roof.

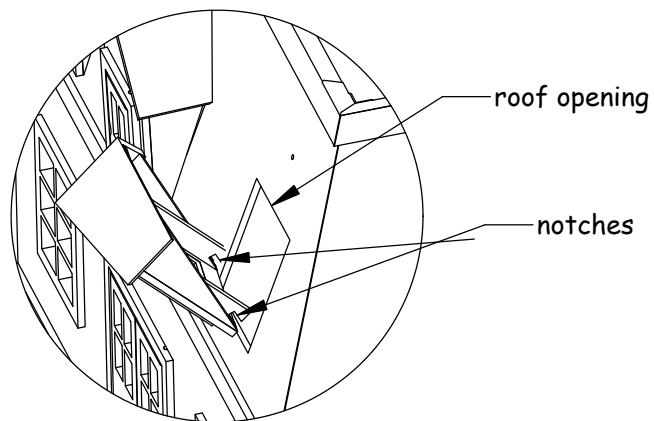

STEP 9

Using 3 Wood Screws, attach the Roof Door and 2 Roof Windows by fitting the notches at the bottom of the part over the opening in the roof as shown below, then tightening the screws.

Be sure to attach the Roof Door in the center opening of the roof.
